AidNexus MVP

November 2, 2025

AidNexus AI MVP

Core Concept

The **FirstAid AI MVP** is an innovative AI-powered assistant designed to provide immediate and accessible emergency guidance. Utilizing Streamlit and the Google Gemini API, it enables users to upload images for injury analysis and receive step-by-step first aid instructions tailored to their needs.

AI-Powered Injury Analysis for Immediate Guidance

Accessibility and Inclusivity Features

Designed Inclusively

Our application is built to be user-friendly for everyone, ensuring equal access to vital first aid information.

Voice Commands

Users can navigate the app seamlessly using simple voice commands, enhancing accessibility for all.

Audio Announcements

All features are equipped with audio announcements, providing essential information to visually impaired users in real-time.

User-Centric Design

The design focuses on intuitive interactions, prioritizing ease of use for individuals in emergency situations.

AI Workflow Overview

Structured Prompts

Utilizing structured prompts ensures adherence to medical safety guidelines for accurate guidance.

Certified Instructor

The AI operates as a 'certified first aid instructor' to build trust and reliability.

Technical Setup Overview

Setup Steps

Clone the repository and set up your virtual environment for seamless integration.

Development Framework

Built with Python and Streamlit, integrating Google Gemini API for functionality.

Use Cases and Benefits

Individuals

Easy, immediate guidance during emergencies using AI-powered insights.

Caregivers

Quick reference tool for effective and timely first aid responses.

Future Roadmap

Injury Database

Expanding our **injury database** for comprehensive coverage of medical scenarios. Under the FHIR protocols and guidelines

Wearable Devices

Integration with **wearable health devices** for real-time monitoring and alerts.

Thank You!
